Start a new geometry file, tap **File, New** and then **OK**.

Select the line segment tool from the drawing tools.

Alternatively, tap **Draw, Basic Object, Line Segment.**

Tap the screen at the start of the line and tap again for the end of the line, and segment AB is drawn.

Alternatively, tap the screen once to indicate the starting point, and tap and drag to locate the other end of the line.
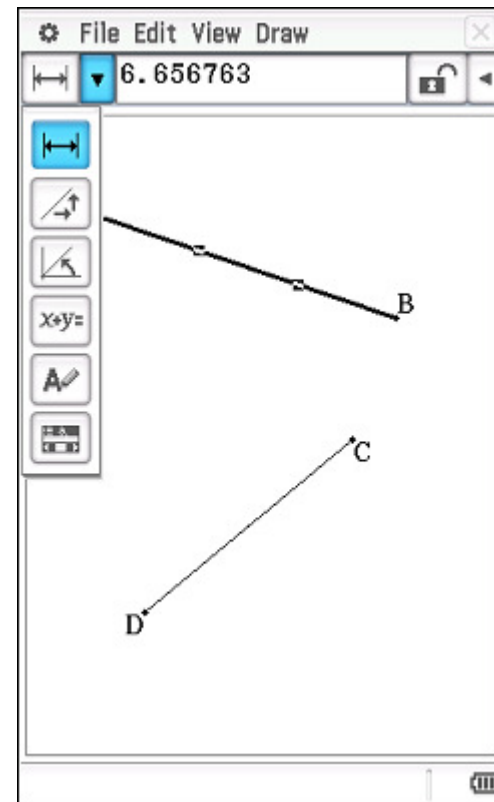

**To determine features of a line segment**

Tap the right arrow at the right of the toolbars to access the measurement toolbar.
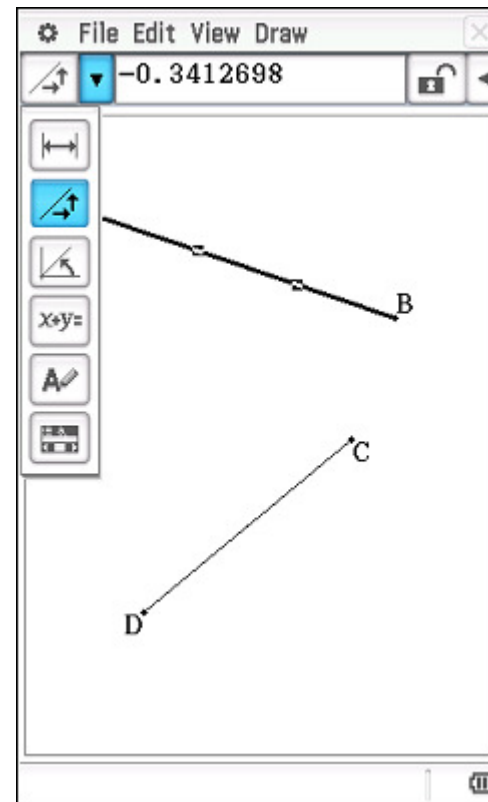

Tap once on a blank part of the screen to deselect everything and then tap once on the middle of a line to select it.

By default, the toolbar shows the length of the line segment.

**Length of AB**

**Gradient of AB**

**Equation of AB**
